Other Hepatitis Rapid Test Kits

One step HAV (IgG or IGM) Antibody Test

The hepatitis A virus specific immunoglobulin M (IgM) antibody is a specific serological marker for early diagnosis of hepatitis A infection. The hepatitis A virus specific immunoglobulin G (IgG) antibody is a specific serological marker for the supervising of the hepatitis A infection. The dot immunogold combination assay (DIGFA), developed since 1989, is a new technique with the merit of simple and rapid immunological detection.

Features

1. Takes less than 10-20 minutes to be sure;
2. Sensitivity: 99.0%; Specificity: 99.0%;
3. Qualitative results are read visually without any instrument;
4. Both GICA and DGFA methods are available.
