

Handheld Infrared Vein Finder

Product Features

- ▶ Two kinds of imaging modes : blue & white, red & green, one-click switching freely;
- ▶ Image performance optimization, adjustable brightness, high accuracy;
- ▶ Medical cold light, safe for your eyes
- ▶ Sleep function, more comfortable operation
- ▶ Elegant design, easy to carry.

Science and technology improving one small step will benefit a big step for human.

Product Introduction

It detects subcutaneous superficial vein by patented infrared light technology, displaying vivid vein map on the surface of skin. It helps medical staff find vein's location and reduce needle stick attempts.

For a variety of patients

It provides a significant help for patients with vascular positioning difficulties, such as obesity, swollen tissue, hairy skin, dark skin, hypovolemia, etc.

Product Function

It assists medical staff to locate and find veins quickly and accurately during I.V.. It can increase the success rate of I.V., relieve nurses' work pressure, reduce the patient's fear and pain and improve the quality of medical services

Application

used for hospital treatment, firefighting rescue, military disaster relief, especially in dim environment or in those environments which people can't see clearly.
